Summary

Software Engineer with internship experience building production systems in a medical AI environment. Finalist, Google Agentic AI Hackathon (selected from 56,000+ developers). Strong full-stack background across backend infrastructure, automation pipelines, and client-facing systems.

Technical Skills

Languages: JavaScript, TypeScript, Python, SQL, Java

Frontend: React, Tailwind CSS, Responsive Design

Backend: Node.js, Express.js, Flask

Databases: MongoDB, MySQL, Firestore

Tools/DevOps: Docker, Git, GitHub, Postman, VS Code, Firebase Tools, GCP, OpenAI, Vertex AI

Work Experience

Biocliq AI

Dec 2025 – Present

Software Engineer Intern

Bengaluru, India

- Engineered a **unified DICOM routing system and API gateway** by consolidating two independent pipelines into a single **PyQt5 client + FastAPI backend**, enabling automatic study classification and routing across multiple AI products.
- Automated **client onboarding infrastructure** via a CLI tool handling MongoDB configuration, Docker Compose updates, JWT provisioning, and user setup - reducing onboarding time from **30 minutes to 5 minutes (6x faster)**.
- Built and deployed a **full-stack admin dashboard (Next.js + Flask)** with cross-product analytics, subscription tracking, and automated alerts, enabling real-time visibility into client usage and reducing churn risk.
- Implemented **cross-server data aggregation** by designing a Flask API bridge between isolated systems, enabling automated weekly reporting and unified analytics across products.
- Improved system performance and reliability by reducing **image rendering latency by 50%** using slice bundling and IndexedDB caching, lowering **MongoDB memory usage by 30%**, and resolving critical production issues across DICOM processing, JWT authentication, Docker deployments, and templating pipelines.

Varcons Technologies Pvt. Ltd.

February 2025 – May 2025

Full-Stack Developer Intern

Bengaluru, India

- Engineered **SMART Attendance Payroll Adjustment System** using **MERN** with role-based authentication and 5+ core modules.
- Integrated secure login, CRUD features, and real-time payroll logic, reducing manual interventions by 70%. Optimized frontend responsiveness by 40% and streamlined API interactions for seamless data sync.

Projects

Sahayak - Agentic AI Teaching Assistant | *React, Node.js, Tailwind CSS, Typescript*

- Developed an AI-powered teaching assistant used in rural classrooms, integrating 6+ features (e.g., story generation, visual aids, concept explanation) using Gemini API, Firebase, and React.js.
- Enabled content delivery in 3+ local languages with support for voice-based input and low-connectivity use, improving learning access for 500+ students in under-resourced schools.

KrishiMitra - Agriculture Advisor | *React, Tailwind CSS, LangGraph, Gemini API, FastAPI*

- Built a multi-agent agentic AI advisor for India's agri-ecosystem, using LangGraph and Gemini API to route multilingual, voice-based farmer queries across crop, weather, market, and finance domains.
- Engineered an offline-first PWA with service workers and IndexedDB, delivering confidence-scored, source-cited recommendations from public datasets (ICAR, eNAM, NABARD), deployed live on Vercel.

Education

GM Institute of Technology, Davangere

Dec 2021 – May 2025

Bachelor of Engineering in Information Science and Engineering; CGPA 8.92/10

Davangere, India

Achievements

Finalist

Google Agentic AI Hackathon

- Shortlisted from 56,000+ developers in Google's Agentic AI Hackathon, built an AI teaching assistant with 6+ LLM features in under 36 hours using React.js and Firebase.

Winner

State Level Coding Competitions

- Sukalpa 2023 Coding Competition - Designed algorithm-based solutions under time constraints.
- Psycury Coding Competition, Ignitron 2024 - showcasing logical thinking, speed, and coding accuracy at a competitive state-level event.
